FINWISE — PRODUCT REQUIREMENTS DOCUMENT

Feature: Personalized Onboarding & Activation
Version: 1.2 — Final for Lovable
Platform: Responsive Web (Desktop, Tablet, Mobile)
Product Model: B2B SaaS / PLG / Reverse Trial
Prototype: Interactive frontend with simulated financial data

---

1. Product Overview

FinWise is a financial management platform for small businesses.

It helps users automate financial tasks, reduce manual work, and understand their business finances through a centralized financial workspace.

Core Product Capabilities

Operational Benefits

- Automation: Sync bank transactions automatically.
- Time Savings: Simplify bookkeeping, expenses, and invoicing.
- Accuracy: Reduce manual errors in data entry and reconciliation.
- Compliance: Simplify preparation for tax and financial reporting.

Strategic Benefits

- Real-time visibility into cash positions.
- Centralized financial information.
- Financial reporting and decision support.
- Collaboration across business teams.

Business Problem

FinWise has an aggregate Trial-to-Paid conversion rate of 1.99%.

Product Hypothesis:

Users may struggle to understand where to start and how FinWise can help their business. Guiding users toward an early, tangible experience of financial automation may improve activation and their understanding of the product's value.

This hypothesis requires validation.

Primary Objective

Help users reach their first Aha Moment as quickly as possible.

First Aha Moment:

Successfully connecting a live bank feed and seeing automatically imported and categorized financial transactions populate the dashboard.

For this prototype, all bank connections and transactions are simulated.

Secondary Objective

Help users discover their next meaningful value milestone based on their specific financial goals.

---

2. Target Personas

Primary Persona: Business Owner / Founder

- Wants visibility into business finances.
- Wants to spend less time on financial administration.
- May have limited financial software experience.
- Needs a clear starting point.

Secondary Personas

Finance Manager

- Focused on accuracy, financial reports, and cash flow.

Accountant / Bookkeeper

- Focused on financial reconciliation, expense categorization, and reporting.

Other

- Users whose roles do not match the predefined categories.

Onboarding must support all personas without creating separate onboarding products.

---

3. End-to-End User Journey

Sign Up → Show Product Value → Quick Personalization → Bank Connection → Aha Moment & WOW Celebration → Personalized Product Tour → Dashboard

UX Principles

1. Minimize time to first value.
2. Explain the benefits before requiring setup.
3. Personalize the experience without unnecessary friction.
4. Make progress and expectations clear.
5. Celebrate meaningful achievements.
6. Guide users toward the next relevant value milestone.
7. Allow users to complete non-essential profile information later.

Progress Bar

Use one initial onboarding progress bar consisting of four milestones:

1. Discover FinWise's value
2. Personalize your experience
3. Connect your bank
4. See your financial dashboard

Display:

- Current step, such as "Step 2 of 4".
- Visual progress indicator.
- Approximately 3–5 minutes total estimated setup time.

The time estimate is a provisional UX assumption, not a measured performance claim. Bank authorization and synchronization can take longer.

Do not show separate time estimates for each step.

The sign-up page appears before the four onboarding milestones. The next-feature recommendation appears after onboarding completion.

Keep the progress bar simple and unobtrusive.

---

4. Screen 1 — Sign Up

Objective

Allow users to start their FinWise reverse trial with minimal friction.

Page Layout

Desktop:

- Two-column layout.
- Left: FinWise branding, welcome message, product benefits illustration.
- Right: Sign-up form.

Mobile:

- Single-column layout.
- FinWise logo at top.
- Form prominently displayed.
- Decorative content reduced.

Content

Headline: "Start managing your finances smarter."

Subheadline: "Create your FinWise account and discover a simpler way to manage your business finances."

Form Fields

- Full Name
- Email
- Password
- Confirm Password
- Terms and Privacy consent

Requirements

- Accept any properly formatted email, including Gmail, Outlook, Yahoo, and corporate domains.
- Do not require a company email.
- Do not ask for company details during sign-up.
- Allow users to show/hide passwords.
- Display a "Sign in" link.
- Personalize future messages using the first name.
- Require acceptance of terms before submission.
- Use simulated account creation.
- Do not store actual passwords or implement production authentication.

Validation Messages

Condition	Error Message
Empty name	Please enter your full name.
Empty email	Please enter your email address.

Invalid email	Please enter a valid email address.
Password too short	Use at least 8 characters.
Weak password	Include at least one uppercase letter and one number.
Password mismatch	Your passwords don't match.
Terms unchecked	Please accept the terms to continue.
Simulated duplicate account	This email is already registered. Sign in instead.
Simulated server failure	Something went wrong. Please try again.

UX Requirements

- Inline validation.
- Validate on blur and submit.
- Clear errors when fields become valid.
- Disabled or loading button state during simulated submission.
- Focus indicators.
- Keyboard accessibility.
- Clear feedback on unsuccessful submission.

Primary CTA: **"Create my account"**

The regular prototype flow should accept a valid submission and continue successfully.

---

5. Screen 2 — Product Value

Objective

Show users why FinWise is useful before asking them to connect a bank.

Headline

"Less admin. More clarity. Better decisions."

Description

"Stop entering financial data manually. FinWise helps you organize your finances automatically so you can focus on growing your business."

Three Benefit Cards

1. Automate your finances

- Sync transactions automatically.
- Reduce manual data entry.

2. Understand your cash flow

- Track income and expenses.
- Get a clear view of business finances.

3. Save time on everyday work

- Simplify invoicing.
- Manage expenses and financial reporting.

UI Requirements

- Three clean visual cards.
- Friendly illustrations.
- Bright brand color accents.
- Concise messaging.
- Smooth transitions.
- Hover interactions on desktop.
- Responsive stacked layout on mobile.

Primary CTA: **"Make FinWise work for me"**

---

6. Screen 3 — Personalization

Objective

Collect three key inputs to customize the onboarding and subsequent discovery experience.

All three questions should fit on one concise screen.

Question 1: What's your role?

Options:

- Business Owner / Founder
- Finance Manager
- Accountant / Bookkeeper
- Other

Question 2: What would you like to accomplish first?

Options:

- Automate expense tracking
- Improve cash-flow visibility
- Simplify invoicing
- Prepare reports and taxes

Question 3: How experienced are you with financial management software?

Options:

- Beginner — I'm just getting started
- Intermediate — I've used similar tools
- Advanced — I use financial software regularly

UX Requirements

- Single-select answer cards.
- Selected state clearly visible.
- Hover and keyboard focus states.
- Large tap targets.
- No text typing required.
- Preserve answers when navigating backward.
- CTA enabled after all questions are answered.

Personalization Logic

Role changes terminology, examples, and contextual product messaging.

Goal determines the recommended next value milestone after the first Aha Moment.

Experience level determines the amount of explanation and guidance.

Primary CTA: **"Continue"**

---

7. Screen 4 — Simulated Bank Connection

Objective

Guide users to the first Aha Moment by demonstrating automatic bank synchronization.

Headline

"Connect your bank. Say goodbye to manual data entry."

Supporting Message

"Bring your financial transactions into FinWise automatically and see everything organized in one place."

Important Constraint

Bank connection must ALWAYS be a simulation.

The prototype must never:

- Connect to real bank APIs.
- Ask users for real bank credentials.
- Access actual financial accounts.
- Process real financial transactions.
- Claim to have connected to a real financial institution.

Bank Connection UI

Provide a fictional bank selector, with options such as:

- FinWise Demo Bank
- Northstar Demo Bank
- BlueRiver Demo Bank

All options are fictional and labeled as demo banks.

The user selects a bank and clicks:

"Connect my bank"

Simulated Flow

1. User selects a fictional bank.
2. A simulated authorization panel appears.
3. User confirms the simulated connection.
4. FinWise branded loading animation starts.
5. Connection success is confirmed.
6. Transaction synchronization begins.
7. Mock financial transactions are loaded.
8. The Aha Moment is triggered.

The regular onboarding journey should complete successfully without external dependencies.

Loading Animation

Use the FinWise logo icon as the loading indicator.

Animate the three colored bars sequentially using a gentle bouncing or pulsing effect.

Loading messages:

- "Connecting to your bank..."
- "Securing your connection..."
- "Syncing your transactions..."
- "Organizing your finances..."

Requirements:

- Smooth motion.
- No unnecessary artificial delay.
- Loading buttons prevent duplicate submissions.
- Accessible status feedback.
- Respect reduced-motion settings.
- Never show a successful import before the data has populated.

Error Handling

Include user-friendly, recoverable simulated error states.

State	Message	Action
Timeout	Your bank is taking longer than expected. Please try again.	Retry
Authorization failure	We couldn't complete the authorization. Please try again.	Retry
Cancelled	Your bank wasn't connected. You can try again anytime.	Connect again
Bank unavailable	This bank is temporarily unavailable. Try again or choose another.	Retry / Change bank
Sync error	Your bank is connected, but your transactions couldn't be imported.	Retry sync
Unexpected error	Something went wrong. Your progress is saved.	Retry

These states should be implemented as part of the UI's error-handling logic, without adding a developer testing panel.

---

8. Fictional Company & Financial Mock Data

Objective

Demonstrate the immediate value of FinWise through a realistic populated financial dashboard.

Default Company Profile

Company: Brightside Studio
Industry: Creative & Digital Services
Employees: 8
Country: Spain
Currency: EUR
Bank: FinWise Demo Bank
Account: Business Account ending 4821

All data is fictional.

Dashboard Financial Summary

Use a coherent fictional monthly dataset with these summary values:

Metric	Value
Available cash balance	€24,850
Monthly income	€18,450
Monthly expenses	€9,320
Net monthly cash flow	€9,130
Imported transactions	128
Outstanding invoices	4

The displayed net monthly cash flow must equal income minus expenses.

Mock Transaction Data

Generate 128 fictional transactions for the company.

Include realistic transaction types:

- Client payments
- Rent
- Software subscriptions
- Office supplies
- Contractor expenses
- Internet and utilities
- Advertising expenses
- Professional services

Example visible transactions:

Transaction	Category	Amount
Northstar Client Payment	Income	+€4,500
Office Rent	Rent	−€1,450
Adobe Creative Cloud	Software	−€67
Acme Client Payment	Income	+€2,850
Google Workspace	Software	−€48
Office Supplies	Operations	−€125
Freelance Designer	Contractors	−€950
Internet Provider	Utilities	−€79

Generate the remaining transactions coherently so that financial totals agree with the dashboard summary.

The cash balance represents the resulting account balance and must be reconcilable from a fictional opening balance and net transaction movements.

Mock Dashboard

Create a realistic, visually polished SaaS financial dashboard containing:

- Account balance card.
- Income and expense cards.
- Net cash-flow card.
- Cash-flow chart.
- Recent transactions list.
- Transaction categories.
- Invoicing section.
- Financial reports section.
- Company profile access.

Use realistic data visualization rather than random decorative charts.

Company Profile Completion

Company profile completion is optional.

Do not interrupt the first Aha Moment to request additional company information.

After activation, users can open a profile-completion experience.

Optional fields:

- Company name
- Industry
- Company size
- Country
- Currency
- Business description

Show a non-blocking reminder:

"Make FinWise yours. Complete your business profile."

CTA: **"Complete profile"**

Secondary option: **"Maybe later"**

Use the fictional company profile until the user provides different information.

If the company name is changed, update relevant dashboard labels. Do not invent or silently recalculate real-looking financial metrics based on profile edits.

---

9. Screen 5 — Aha Moment & WOW Celebration

Aha Moment Definition

The Aha Moment occurs when users see automatically imported and organized bank transactions in their financial dashboard.

Trigger Conditions

All three must be true:

1. Simulated bank connection completed.
2. Transaction synchronization completed.
3. The dashboard successfully displays the imported fictional transactions.

Celebration

Use a real animated confetti effect.

The animation should:

- Use FinWise brand colors.
- Appear across the main screen.
- Feel celebratory and memorable.
- Run for a short duration.
- Not interfere with interactions.
- Respect reduced-motion preferences.

- Play only once for the initial activation.

Personalized Message

Use the first name captured during sign-up.

Headline:

"You're connected, [First Name]! 🎉"

Supporting Message:

"128 transactions imported and organized automatically. Your financial dashboard is ready!"

Include a positive visual indicator and a clear transaction count.

Visual Transformation

The Aha Moment should visibly demonstrate the difference between:

Before: An empty financial dashboard.

After: A dashboard filled with categorized financial transactions, balances, and insights.

This transformation is more important than the celebration itself.

Primary CTA: **"Explore my dashboard"**

---

10. Screen 6 — Personalized Product Discovery

Objective

Guide users to the next relevant value milestone after the first Aha Moment.

Contextual Product Tour

Display a brief, interactive, and skippable tour.

Highlight:

1. Financial overview.
2. Imported transactions and categories.
3. The most relevant next feature.

Tooltips should point to real dashboard elements.

The user may:

- Continue the tour.
- Go back within the tour.
- Skip the tour.

Personalized Next Action

Use the goal selected in the questionnaire.

Selected Goal	Recommended Next Action
Automate expense tracking	Review automated transaction categorization
Improve cash-flow visibility	Explore cash-flow insights
Simplify invoicing	Create the first invoice and explore invoice automation
Prepare reports and taxes	Generate a Profit & Loss report

Personalization by Experience

Beginner: More explanation and reassuring guidance.

Intermediate: Shorter instructions and clear benefits.

Advanced: Direct shortcuts and minimal explanations.

Example

If the user selected "Simplify invoicing":

"Alex, ready to save even more time?"

"Your transactions are organized. Let's explore invoice automation."

Primary CTA: **"Explore invoice automation"**

Secondary CTA: **"I'll do this later"**

The CTA must lead to an interactive simulated experience.

Subsequent Value Milestones

Provide lightweight demo experiences for the four recommendation destinations:

- Expense tracking: review categories and demonstrate categorization.
- Cash flow: inspect a financial chart and income/expense breakdown.
- Invoicing: create a fictional invoice, preview it, and demonstrate a simulated payment-tracking state.
- Reporting: generate a fictional Profit & Loss preview.

No real invoice delivery, accounting integration, or payment collection is required.

---

11. Visual Design System

Style

Modern monday.com-inspired Fintech SaaS

The design should feel:

- Colorful
- Friendly
- Minimal
- Trustworthy
- Clear
- Approachable
- Professional

Use an original FinWise design identity. Do not copy monday.com components or logos.

Approved HEX Palette

Color	HEX	Usage
Blue	#3875F7	Primary CTAs, navigation
Green	#5BC77B	Success and activation
Yellow	#F7CE46	Celebrations and highlights
Coral Red	#EB6660	Errors and alerts
White	#FFFFFF	Main background
Black	#000000	Primary text

Optional supplementary accent:

- Pink `#FF158A` for occasional illustration or confetti details.

Use only these brand colors as the primary visual palette. Neutral variants and accessible darker shades may be used for text, borders, surfaces, and interactive states.

Logo

Use the provided FinWise logo asset.

Do not redraw, distort, recolor, or replace the original logo.

Extract the icon from the supplied asset when possible for loading states. Maintain its original proportions and colors.

Typography

Use a modern, friendly sans-serif typeface.

Suggested choice: **Inter**.

Requirements:

- Clear typography hierarchy.
- Readable body text.
- Consistent font weights.
- Appropriate line spacing.
- Accessible text contrast.

Components

- Rounded cards.
- Rounded buttons.
- Clean form controls.
- Subtle shadows.
- Generous spacing.
- Clear navigation.
- Consistent iconography.
- Responsive charts.
- Lightweight animations.

Microinteractions

All relevant UI elements require interaction states.

Buttons:

- Default
- Hover
- Pressed
- Focus
- Disabled
- Loading

Inputs:

- Default
- Hover
- Focus
- Error
- Valid

- Disabled

Selection Cards:

- Default
- Hover
- Selected
- Keyboard focus

Navigation:

- Active
- Hover
- Focus

Use subtle transitions, approximately 150–250 milliseconds where appropriate.

Ensure hover-only information is also accessible by keyboard and touch.

---

12. Mobile, Tablet & Desktop Responsiveness

Desktop

- Modern SaaS onboarding layout.
- Two-column sign-up page.
- Attractive illustrations.
- Financial dashboard with sidebar.
- Multiple dashboard cards per row.
- Charts and tables with ample spacing.

Mobile

- Single-column onboarding.
- Logo clearly visible.
- Large buttons.
- Tap-friendly selection cards.
- Compact progress bar.
- Full-width primary CTAs.
- Stacked financial cards.
- Responsive navigation.
- Appropriately scrollable transaction tables.
- No unintended horizontal overflow.

Target Viewports

- Mobile: 375px

- Tablet: 768px
- Desktop: 1440px

Test all key screens at each viewport.

Accessibility

- Keyboard navigation.
- Visible focus indicators.
- Accessible color contrast.
- Appropriate form labels.
- Clear validation messages.
- Screen-reader-friendly loading states.
- Reduced-motion alternatives.
- Touch targets of appropriate size.

---

13. Technical Scope & State Management

Recommended Technology

- React
- TypeScript
- Tailwind CSS
- Reusable UI components
- A lightweight animation library or CSS animations
- Chart components for financial visualizations

Prototype State

Maintain:

- User first name
- Email
- Personalization answers
- Onboarding progress
- Simulated bank connection state
- Transaction synchronization state
- Aha Moment completion status
- Product tour status
- Company profile
- Next recommended action

Persist safe state locally so the onboarding does not restart unnecessarily after a refresh.

Do not persist passwords or real financial credentials.

Navigation

Provide working routes or equivalent application states for:

- Sign up
- Sign in (prototype)
- Product benefits
- Personalization
- Bank connection
- Financial dashboard
- Profile
- Invoice demo
- Cash-flow view
- Expenses
- Reports

Users should be able to navigate naturally after activation.

Prototype Constraints

Do not build:

- Real banking integrations
- Actual bank authentication
- Production account authentication
- Payment processing
- Real financial data collection
- Real invoice delivery
- A developer/testing panel

All relevant financial features must remain simulated.

---

14. Product Analytics

Primary KPI

Bank Feed Activation Rate

Percentage of new trial accounts that successfully complete simulated bank connection and display imported transactions.

Secondary KPIs

- Sign-up completion rate
- Product-benefits screen completion
- Personalization completion

- Bank connection start rate
- Bank connection success rate
- Successful transaction synchronization rate
- Median time to first Aha Moment
- Onboarding drop-off by stage
- Product tour completion
- Personalized recommendation engagement
- Next-value-milestone completion
- Trial-to-Paid conversion (future measurement)

Event Names

- `signup_started`
- `signup_completed`
- `benefits_viewed`
- `personalization_started`
- `personalization_completed`
- `bank_connection_started`
- `bank_connection_succeeded`
- `bank_connection_failed`
- `transaction_sync_started`
- `transaction_sync_succeeded`
- `transaction_sync_failed`
- `aha_moment_reached`
- `confetti_displayed`
- `product_tour_started`
- `product_tour_completed`
- `product_tour_skipped`
- `next_action_recommended`
- `next_action_started`
- `next_action_completed`
- `profile_completed`

For the prototype, events may be recorded locally. No production analytics service is required.

Never include passwords or other secrets in analytics events.

---

15. Final Acceptance Checklist

Sign-Up

- Any valid email domain is accepted.
- Full name, email, password, confirmation, and consent are validated.
- Inline validation messages work.
- Password visibility can be toggled.
- User's first name is saved for personalization.
- Company details are not mandatory.
- Prototype sign-in navigation is functional.

Product Benefits

- Benefits are shown before bank connection.
- Messaging emphasizes automation and less manual entry.
- Benefit cards use FinWise colors.
- Continue CTA works.

Personalization

- Three questions are present.
- Selected answers persist.
- Answer cards have visible selected and hover states.
- Recommendations change according to goal selection.
- Explanation depth changes according to experience level.

Progress & Loading

- A progress bar appears throughout the pre-Aha onboarding.
- Users see the current step and total number of steps.
- Only an overall estimated setup time is shown.
- FinWise icon animates during loading.
- Loading states are accessible.
- Buttons cannot be submitted repeatedly while loading.

Bank Connection

- Bank connection is always simulated.
- No real bank credentials are requested.
- Fictional bank selection works.
- Simulated authorization works.
- Transaction synchronization occurs.
- Error states have clear messages and recovery actions.
- Normal onboarding completes successfully.
- There is no developer testing panel.

Aha Moment

- The dashboard transitions from empty to populated.
- The fictional transaction dataset is loaded.
- All displayed totals are consistent.

- Confetti is a real working animation.
- Confetti occurs only after successful sync.
- The message includes the user's first name.
- The number of imported transactions is shown.
- Confetti doesn't block interactions.
- Reduced-motion alternatives are supported.
- Initial confetti does not replay endlessly after refresh.

Financial Dashboard

- Shows account balance.
- Shows income and expenses.
- Shows net cash flow.
- Shows financial charts.
- Shows imported transactions.
- Shows invoicing and reports navigation.
- Shows optional company-profile reminder.
- Mock data is coherent and fictional.

Product Discovery

- Contextual product tour works.
- User can skip the tour.
- Next-action recommendation is personalized.
- Invoice automation is offered to users interested in invoicing.
- Cash-flow recommendations lead to the cash-flow view.
- Expense recommendations lead to the expense view.
- Report recommendations lead to the reporting view.
- Next-feature destinations have functional simulated interactions.

Design & Responsiveness

- Official FinWise logo is used.
- Approved HEX colors are applied.
- Styling is modern, playful, and trustworthy.
- Buttons have hover, active, focus, disabled, and loading states.
- Forms have visible error states.
- Mobile layout works at 375px.
- Tablet layout works at 768px.
- Desktop layout works at 1440px.
- Navigation is usable on touchscreens.
- No essential interaction relies exclusively on hover.
- No broken layouts or unintended horizontal overflow.

---

16. Definition of Done

The FinWise prototype is ready when a user can:

1. Create a simulated account with any valid email.
2. Understand the product's benefits.
3. Complete three personalization questions.
4. See overall onboarding progress.
5. Select and connect a fictional bank.
6. Watch the animated FinWise loading icon.
7. See fictional transactions automatically populate a financial dashboard.
8. Experience real confetti and a personalized success message.
9. Explore the populated dashboard.
10. Complete or skip a contextual product tour.
11. Receive a personalized recommendation for the next value milestone.
12. Try the relevant next financial feature.
13. Complete company-profile information later.
14. Use the application on desktop, tablet, and mobile.

Final Product Principle

Show value early. Make activation effortless. Celebrate the first success. Personalize the next discovery.
